

A1 selection-bias defense: clean subset is a structural restriction, not a cherry-pick

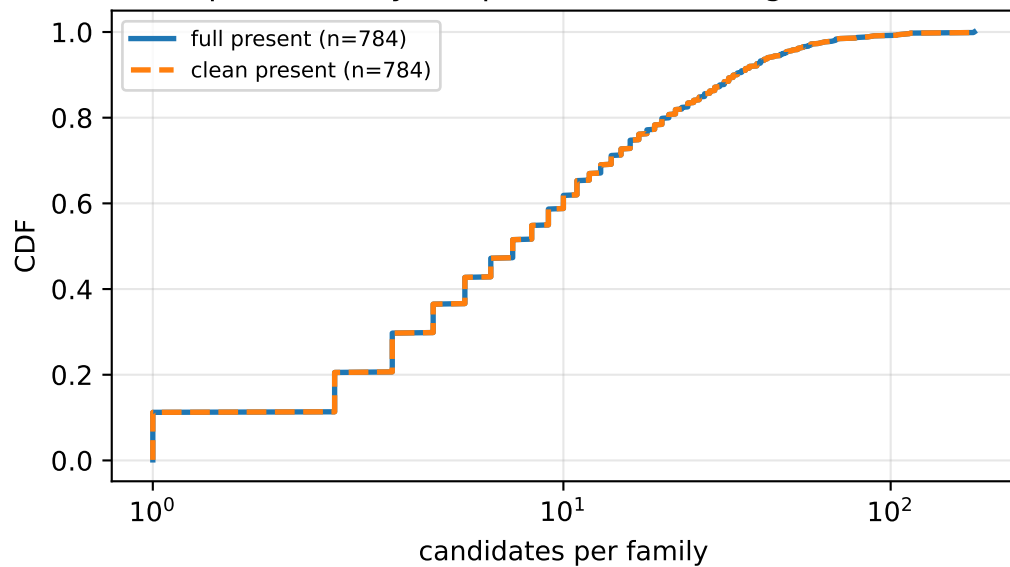

LVIS / GDino: candidates/family CDF
(present-only, KS $p > 0.05$ = indistinguishable)

LVIS / GDino: category share by rank
(parallel curves = same shape, no truncation bias)

OpenImages V7 / GDino: candidates/family CDF
(present-only, KS $p > 0.05$ = indistinguishable)

OpenImages V7 / GDino: category share by rank
(parallel curves = same shape, no truncation bias)
